

MAKE THE SWITCH TO OUR SMARTER WMS

ACHIEVE GREATER EFFICIENCY THROUGH AUTOMATION

Efficient 3PL Warehouse Management requires constant monitoring of stock movements and locations, often across a number of different warehouses. Our powerful 3PL WMS module is designed to handle multi-user and multi-location scenarios. It can readily manage goods across multiple warehouses and zones within each warehouse down to bulk bin and stack locations.

Already the system of choice for many national 3PL Warehousing providers, our system is capable of handling the challenges and technical requirements of Australia's largest supply contracts.

WAREHOUSE

Catering to all modern contract logistics practices WAREHOUSE will instantly boost the effectiveness of your workforce by providing accurate and up-to-the-minute information for otherwise time consuming and complex activities such as resource and demand planning, replenishment scheduling and quality control procedures.

- ✓ Paperless RF warehousing with many advanced features
- ✓ Stock control; multiple bin & floor stack locations
- ✓ Automated, flexible & configurable charge methods
- ✓ Warehouses, zones, areas, bin & floor locations
- ✓ Multiple units of measure & SKU management
- ✓ Configurable pick-routines & put-away algorithms
- ✓ Rules-based workflow management
- ✓ Rolling stocktake & replenishment routines
- ✓ Automated service & storage charges
- ✓ Warehouse invoicing
- ✓ Highly automated workflow routines
- ✓ Despatch & carrier management
- ✓ Customer web portal
- ✓ Inbound & outbound EDI
- ✓ KPI reporting & daily performance analysis

SCANNING

The accuracy of RF scanning has revolutionised the modern warehouse by ensuring the right product, in the right quantities, for the right destination is processed in real-time with up-to-the-minute data flow directly to your business system. We offer completely paperless warehousing operations from inbound scanning to scan-to-load and everything in-between. Introducing scanning to your organisation will deliver fast returns on initial capital investment and provide on-going dividends for many years to come.

- ✓ Batch & serial tracking
- ✓ Rules-based workflow management
- ✓ Rolling stocktake & replenishment routines
- ✓ Configurable pick-routines & put-away algorithms

Fully automate and manage the transfer of information flows between you, your client and your customer with our Electronic Data Interchange (EDI) engine and visual mapping tool. We are EDI specialists with over 10 years experience in EDI mapping, configuring and coding data interchange workflows from one system to another.

- ✓ Acknowledgements & file error management
- ✓ Trigger alerts and email & SMS status updates
- ✓ Confirmations at each operational status (XML, CSV, FTP, email)
- ✓ Highly configurable rules engine & visual mapping tool

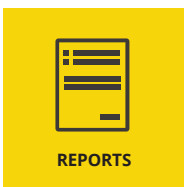

WEB is a tool that provides an immediate win-win situation for both you and your customer. It's a 24 hour self-serve portal designed to enable and empower customers to help themselves. For you this means a significant reduction in labour intensive activities, thereby reducing overheads and costs. WEB should be an integral part of any organisation's cost management strategy.

- ✓ Directly connected TRANSPORT
- ✓ Enter TMS pickup, WMS stock delivery & orders
- ✓ View & print historical transactions & documents
- ✓ Print labels, consignments and WMS order paperwork
- ✓ Security controlled at customer level by you

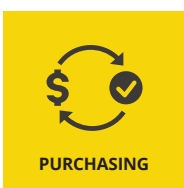

Designed specifically for third-party warehousing, transport and logistics industries, FINANCIALS is where all operational transactions come together as one seamless flow of real-time information. Current and accurate information at your fingertips will provide greater financial control, with deeper visibility of all operational areas, enabling you to better manage costs and drive profitability.

- ✓ Accounts payable & receivable
- ✓ BAS, bank reconciliation & distributions
- ✓ Cash and profit centre accounting
- ✓ Operations cost management
- ✓ Payment & liquidity management
- ✓ Consolidated multi-company & EOM reporting
- ✓ Reporting by division, location, cost centre & GL budgets

REPORTS allows you to create powerful, richly formatted, dynamic reports from virtually any data source from any area of operations. You can add conditional formulas to drive different actions and tasks, and choose how to present and deliver them.

- ✓ Generate reports directly from the database
- ✓ Schedule recurring reports to specific emails
- ✓ Formula drive "if-then-else" instructions
- ✓ Presentation layer design via intuitive native WYSIWYG interface

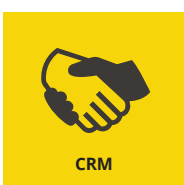

Purchase order management when tightly integrated to all relevant areas of operations, including workshop, financials and warehousing, means users can generate purchase orders specific to their needs, email the supplier from within and request manager sign-off.

- ✓ Purchase and forecast orders
- ✓ Semi-automated stock replenishment
- ✓ Integrated workshop & financials
- ✓ Invoice against purchase order receipt
- ✓ Reports including KPI

Effectively manage and track the location, quantity, condition and depreciation of your assets. When integrated to FINANCIALS, the asset register becomes an integral part of your business system giving you full visibility of your company's assets at an instant, enabling faster more informed decisions about managing them.

- ✓ Disposal process
- ✓ Depreciation Book
- ✓ Tax Value – by category, location, department
- ✓ GL location reporting
- ✓ Automatically post depreciation figures
- ✓ Asset Value Reporting

Centralise communications between operations, administration, accounts, management and subcontractors. Most commonly used as a contact management system to improve internal communication flows, leading to higher service levels and customer satisfaction.

- ✓ Notes & issues registering
- ✓ Management tools & reporting
- ✓ New opportunity management
- ✓ Document management
